0.4% STRYCHNINE BAIT USE PLANNING WORKSHEET

Disclaimer: This document is intended to be a general resource document only. Additional information may need to be added on some operations. Always follow the product label, the manufacturer's instructions, and provincial stewardship guidelines.

Helpful Information: If you have already developed a **farm site map** for your operation, it will be helpful to use it here. Google maps can be a helpful tool in creating a map for use here as well. Always refer back to the product label, the manufacturer's instructions, provincial stewardship guidelines, and other applicable resources, such as those by AgSafe Alberta.

IDENTIFIED	NOT APPLICABLE	ITEM & DESCRIPTION
		Property lines and access points – Identify your property lines and all access points to it.
		Dwellings – Identify where people live both on the property and adjacent or next to the property.
		Water sources – Include dugouts, hydrants, pump houses, streams, creeks, etc. both on your property and next to it.
		Fields, pastures and pens – Identify those both on your property and next to it.
		Exclusion zones – Identify areas where bait is ***not to be used*** due to potential risks. These will include areas where there may be a risk to human life (e.g., near play areas, recreation areas, areas that are or will be open to the public, etc.) where non-target species may be at risk (e.g., livestock, poultry, pets, wildlife), and near sources of water (e.g., pond, creek, slough, etc.).
		Bait locations – Identify areas where the product will be placed.
		Roads and paths – Identify the roads and paths used to access areas where bait will be used.
		Location of warning signs – Warning signs *must* be placed at all normal access points to and where bait will be placed. You should also place warning signs at other reasonable locations to ensure effective communication of the hazard to others who may be impacted (e.g., a neighbour who walks with their dog along the road where a poisoned ground squirrel or bird could be picked up and/or eaten by the dog in the ditch). Identify all locations where warning signs will need to be placed with thought given to their visibility (e.g., not placed behind a bush).
		Storage area – Identify where the product will be securely stored.
		Burial location – If carcasses will be buried, write the distance between the burial location, bodies of water, dwellings, etc.
		Incineration location – If carcasses will be incinerated, identify or indicate the location of the incinerator.
		Map scale – Write the distance between bait locations, dwellings, bodies of water, etc.

Notes/Comments:
